7 Conclusions

Acoustic modeling was conducted for the Facility to assess the potential noise impacts associated with construction and operations activities. The modeling analysis was conducted using the parameters and methodology described in Sections 5 and 6 of this report. Results are displayed in the form of sound contour plots, with Facility-generated sound levels shown as color-coded isopleths. The resultant sound contour plots are independent of the existing acoustic environment (i.e., the plots and tabulated results represent Facility-generated sound levels only and do not include existing non-Facility related noise sources), ambient noise may mask some aspects of the Facility-generated noise.

The construction was analyzed in phases including site grading and compaction, trenching and foundations, equipment pads, and equipment installation. The highest levels are associated with trenching and road construction, with receptor 163 receiving a level of 81 dBA. Construction levels will primarily be limited to daytime hours. If required, noise mitigation strategies will be used to minimize offsite noise impacts to the extent practicable and reasonable pending engagement with regulatory agencies and other stakeholders, as applicable.

HDD activities may be used at 21 sensitive electrical line crossings and all potential HDD crossings were modeled to evaluate potential noise impacts at all NSAs. Detailed modeling results of all HDD construction is shown for the 10 most impacted receptors in Table 24 and for all receptors in Table A-5. The loudest impacts will be at receptors 166 and 172 with a level of 79 dBA.

Modeling results of the Facility operations mitigated sound levels are at or below 45 dBA (including the tonal penalty) at all receptors, meeting the §94-c limit for participating and nonparticipating residential receptors. In addition, the Facility Substation transformer is at or below 40 dBA (including the tonal penalty) at the closest home. All property line sound levels are at or below 43 dBA, well below the ORES limit of 55 dBA and the Town of Somerset's limit of 50 dBA. Results also show compliance with the Town of Somerset's Solar Law of 45 dBA at a residential structure.

The Facility has been designed to comply with 19 NYCRR §900-2.8 and the Uniform Standards and Conditions and impacts related to noise and vibration have been avoided and minimized to the maximum extent practicable.

Test Condition

1. The PV Grid-Connected Inverter (SG3600UD-MV) is combined by inverter and transformer, sample ATC210014(1) is the transformer, and sample ATC210014(2) is the inverter, they are measured separately;
2. Reference box of the transformer: $l_1=2000$, $l_2=1940$ mm, $l_3=2600$ mm, and the measurement distance $d=1300$ mm, 12 microphone positions are used as shown in Fig.1 according to Annex C in the ISO 3746-2010, and the measurement surface area $S_1 = 92.2\text{m}^2$;
3. The Transformer is test in a silent room, and its low voltage side was connected to 660V-60Hz power supply(transformer is in no-load state);
4. Reference box of the inverter: $l_1=2200$ mm, $l_2=1500$ mm, $l_3=2400$ mm, the measurement distance $d=1300$ mm, 12 microphone positions are used as shown in Fig.2 according to Annex C in the ISO 3746-2010, and the measurement surface area $S_2 = 85.5\text{m}^2$;
5. The inverter is test in a industrial room and is set to the full load state ;
6. Each microphone position is tested for 30s;
7. The main equipment for testing is shown in Table 1;
8. The microphone was field calibrated before and after the measurements to verify accuracy of the measurements.

-------------	--	--

1 INTRODUCTION

RWDI was retained by SunGrow USA Corporation to conduct an sound power measurement and determination for the SunGrow SG3150-MW inverter transformer pair used in large scale solar energy facilities. Measurements of the SunGrow SG3150 were conducted on two operating SunGrow SG3150U inverters at the Techren Solar One facility, in Boulder City, Nevada. The louder of the two units are presented in this memorandum.

This report provides a discussion of the methodology and test parameters. Attachment "SunGrow_SG3150U_Sound_Power.pdf" which provides just the computed sound power levels, and can be given to developers for use in noise assessments.

2 METHODOLOGY

The method for determining the sound power of the unit was done in conformity to the ANSI S12.56-2011 / ISO 3746:2010 standard, on the determination of sound power using noise source sound pressure. The exception to this is the presentation of all measurement values, and the calculation of uncertainties from the measurement. Full measurements and uncertainty metrics can be given and calculated upon request. The louder of the two measured devices is presented in this report.

Based on the overall dimensions of the unit, a parallelepiped method was followed using the Annex C.6 layout for a large machine on a single reflecting surface. A reference distance of 1.25 m was determined for the measurements, and a total 18 measurements taken. Two measurement paths were defined for the perimeter at a distance 1.25 m from the unit.

Path 1 was at a height of 1 m and Path 2 was at a height of 3 m. A third path, Path 3 was defined for the top surface and was measured at a height of 4.15 m above ground. Each measurement was 1 minute in length. Figure 1 shows the measurement locations and the defined paths.

Sound power levels were calculated for each 1/3 octave band, using the calculated measurement surface consisting of the three measurement paths Background levels were sufficiently low that no K_{1A} correction was applied to frequency levels above 125 Hz.

Figure 1: The three measurement paths defined for the SG3150U unit, according to ANSI S12.56-2011

2.1 Test Conditions

Measurements were conducted on December 12, 2019 by RWDI staff at the Techren Solar One facility, in Boulder City, Nevada. Measurements occurred outdoors with no reflecting surfaces present other than the ground. The ground consisted of hard packed gravel and dirt and may be considered moderately reflective.

Weather on the day was slightly overcast with moderate temperatures of 11 °C and little to no wind present during the measurements. Figure 2 shows the SunGrow SG3150U and the surrounding area.

The units were running at least 90% load at the time of measurement and may be considered as running under conditions corresponding to maximum sound generation representative of normal use. The measurements were taken within 2 hours of peak solar noon.

A Bruel & Kjaer type 2250 sound level meter was used for the measurements. The 2250 is a Type 1 integrating sound level meter. The sound level meter was field calibrated before and after the measurements to verify accuracy of the measurements. Table 1 shows the make, model and serial number of the sound level meter, and the pre and post measurement calibration sensitivities.

Figure 2: Image of Measurement taken at the Techren Fist Solar Facility of the Sun Grow SG3150U

Table 1: Sound Level Meter and Calibrator with Pre and Post Calibrations

Description	Value
Manufacturer	Bruel & Kjaer
Sound Level Meter Type	2250 – Type 1
Serial Number	2749842
Transducer Serial Number	2741422
Preamplifier Serial Number	15128
Calibrator (B&K Type 4231)	2605873
Pre-Calibration Sensitivity (mV/Pa)	48.02
Post-Calibration Sensitivity (mV/Pa)	48.05

3 RESULTS

The sound pressure measurements were used to determine an overall sound power for the acoustic centre of the unit and follows the ANSI standard methods.

Table 2 shows the calculated sound powers in 1/1 octave bands and the overall A-weighted and un-weighted sound powers. Table 3 shows the calculated sound powers in 1/3 octave bands.

Table 2: Calculated SG3150U Sound Power Level for 1/1 Octave Bands

Item	Levels at Octave Band Center Frequencies (dB)									Overall Sound Power

DuraTrack® HZ v3

Three decades of field-tested design improvements have resulted in the DuraTrack® HZ v3 — the most durable, reliable tracking system under the sun. While our single-bolt module clamp and forgiving tolerances streamline installation, and our flexibly linked architecture maximizes power density, it's our innovative use of fewer components and a failure-free wind management system that makes Array Technologies the best choice for solar trackers. **Better. Stronger. Smarter.**

HIGHEST POWER DENSITY.

Higher density means more power and more profit. DuraTrack HZ v3 offers the unique ability to maximize the power density of each site, boasting 100 modules per row and higher density than our closest competition.

LEADING TERRAIN ADAPTABILITY.

Our flexibly linked architecture, with articulating driveline joints and forgiving tolerances, creates the most adaptable system on the market for following natural land contours while creating the greatest power generation potential from every site.

FEWER COMPONENTS. GREATER RELIABILITY.

Array was founded on a philosophy of engineered simplicity. Minimizing potential failure points (167 times fewer components than competitors), DuraTrack HZ v3 consistently delivers higher reliability and superior uptime.

FAILURE-FREE WIND DESIGN.

DuraTrack HZ v3 was designed and field tested to withstand some of the harshest conditions on the planet. It is the only tracker on the market that reliably handles wind events with a fully integrated, fully mechanical, passive wind-load mitigation system without the need for complex communication systems, batteries, or power.

ZERO SCHEDULED MAINTENANCE.

Maintenance-free motors and gears, fewer moving parts, and industrial-grade components—what does this mean for our customers? No scheduled maintenance required. While our competitors average two unscheduled maintenance events per day, we average only one per year.

COST VERSUS VALUE

We believe value is more than the cost of a tracking system. It's about building with forgiving tolerances and fewer parts so construction crews can work efficiently. It means protecting your investment with a failure-free wind management system. It also includes increasing power density. But most of all, value is measured in operational uptime, or reliability.

THE GLOBAL LEADER IN RELIABILITY

Array has spent decades designing and perfecting the most reliable tracker on the planet. Fewer moving parts, stronger components and intelligent design that protects your investment in the harshest weather are but a few of the innovative differences that keep your system running flawlessly all day and you resting easy at night.

30 GW YEARS OF OPERATION

167x FEWER COMPONENTS THAN COMPETITIVE TRACKERS

STRUCTURAL & MECHANICAL FEATURES/SPECIFICATIONS

Tracking Type	Horizontal single axis
Less than 1 drive motor /MW	Up to 1.559 MW DC
String Voltage	Up to 1,500V DC
Maximum Linked Rows	32
Maximum Row Size	116 modules crystalline, and bifacial: 240 modules First Solar 4; 90 modules First Solar 6 and 6 Plus
Drive Type	Rotating gear drive
Motor Type	2 HP, 3 PH, 480V AC
East-West/North-South Dimensions	Site / module specific
Array Height	54" standard, adjustable (48" min height above grade)
Ground Coverage Ratio (GCR)	Flexible, 28-45% typical, others supported on request
Terrain Flexibility	N-S tolerance: 0-15% standard, 26% optional; Driveline: 40° in all directions
Modules Supported	Most commercially available, including frameless crystalline, thin film, and bifacial
Tracking Range of Motion	± 52° standard, ± 62° optional
Operating Temperature Range	-30°F to 140°F (-34°C to 60°C)
Module Configuration available.	Single-in-portrait standard, including bifacial. Four-in-landscape (thin film)
Module Attachment	Single fastener, high-speed mounting clamps with integrated grounding. Traditional rails for crystalline in landscape, custom racking for thin film and frameless crystalline and bifacial per manufacturer specs.
Materials	Pre-galv steel, HDG steel and aluminum structural members, as required
Allowable Wind Load (ASCE 7-10)	140 mph, 3-second gust exposure C
Wind Protection	Failure free passive mechanical system protects against wind damage without the use of complex communications systems, batteries — no power required

ELECTRONIC CONTROLLER FEATURES/SPECIFICATIONS

Solar Tracking Method	Algorithm with GPS input
Control Electronics	MCU plus Central Controller
Data Feed	MODBUS over Ethernet to SCADA system
Night-time Stow	Yes
Tracking Accuracy	± 2° standard, field adjustable
Backtracking	Yes

INSTALLATION, OPERATION & MAINTENANCE

Software	SmarTrack optimization available
PE Stamped Structural Calculations & Drawings	Yes
On-site Training and System Commissioning	Yes
Connection Type	Fully bolted connections, no welding
In-field Fabrication Required	No
Dry Slide Bearings and Articulating Driveline Connections	No lubrication required
Scheduled Maintenance	None required
Module Cleaning Compatibility	Robotic, Tractor, Manual

GENERAL

Annual Power Consumption (kWh per 1 MW)	400 kWh per MW per year, estimate
---	-----------------------------------

Attachment 5
Example Noise Barrier Specifications

PREPARATION

- **Relax material** – Unroll the material and allow it to relax before installation. DO NOT drag the AcoustiFence material as this will scratch or mar the surface. Place the material in direct sunlight or, if the weather is below 60°F, place it indoors at room temperature for several hours. Cold temperatures will reduce flexibility during installation. Do not allow material to crease or fold.
- **Clean area around fence structure** - Clean area where fence will be installed. Remove any foreign objects that might otherwise make it difficult to attach fence, i.e. old nails or screws, tree limbs, rocks, etc.
- **Base (footer) of fence** - After complete installation, the footer edge of the fence will need to be covered to seal all air gaps and to create an acoustical seal. Depending on the actual length of fence and in-field installation, the Acoustifence might have to be buried or a material built up to close all gaps.

Figure 1-Stainless Steel Tie Orientation

Secure the Header

Secure the header ties around the rail ONLY. Do not include the chain link fence. This will allow the installer to pull the fence taught (horizontally) as required for the entire installation. Each grommet gets one fastener. Corner grommets get two ties. DO NOT release all the material weight on corner grommets alone.

1. Secure First Terminal Edge

Loosely fasten all the leading terminal edge grommets (first fence only) to the chain link fence or post as shown in Figure 1. When all ties have been applied, tighten fasteners using the staggered method. Each grommet gets one tie secured in a horizontal direction. If a single curtain application, both side edges are considered a terminal edge.

2. Secure Base

Secure bottom grommets to the base of the fence structure. Secure each footer as the curtain is hung. If curtain is longer than fence structure, lie on ground and follow Step 5 for securing instructions.

3. Install Additional Curtains

Secure the header of the second curtain using the ending grommet of the first curtain creating the 2" overlap. Keep all curtains taught as the end of one curtain is secured with the beginning of the new curtain to reduce wrinkles while installing. Repeat as necessary for each additional curtain.

4. Ending Terminal Edge

Fasten the SS Ties as shown in Figure 1 for the trailing terminal edge orientation.

5. Bury and Trim

When the fence is completely installed, follow the recommended base (footer) of fence recommendations. This step will vary depending on the ground surface of fence and surrounding area. Once all ties have been properly snug according to location, trim and dispose of SS tie ends according to local and regional waste laws.

There are many ways to hang Acoustiblok Industrial Curtains on a solid structure. Please visit our website at acoustiblok.com for installation suggestions from other satisfied customers.

1. Secure the Header

Prepare wall – Make sure wall is free from objects that may pierce material. While attaching the header to the structure, maintain support on remainder of fence. If using a fastener application (screw/washer or staple) do not leave more than 2ft² without a fastener. If using framework (as shown above) be sure to secure all fence edges with the framework.

2. Secure the Edges

Permanently attach both edges to structure. Be sure all air gaps are sealed to block sound and noise through fence.

3. Secure the Footer

Permanently attach bottom edge to structure.

8 FT DOUBLE FRAMED FULL PRIVACY - PICKET FENCE
