Re: Ellenburg Wind Repowering Project August Update

AES continues to advance the Ellenburg Wind Repowering Project through the state permitting process. The project remains under review following issuance of the draft siting permit and the project team continues to coordinate required filings, notices, and permitting activities as work progresses toward a final siting determination.

The timing of future construction activities remains dependent upon receipt of all necessary approvals, including FAA Determinations of No Hazard for the permitted turbine locations.

AES remains engaged in the local community through sponsorship and outreach activities and welcomes opportunities to continue supporting local organizations and programs.

If there are any questions or concerns, please do not hesitate to reach out to the project team:
