Re: Chateaugay Wind Repowering Project

August 2026 Chateaugay Wind Update

AES continues to advance development of the Chateaugay Wind Repowering Project in the Town of Chateaugay. AES continues to coordinate with agencies, consultants, and local stakeholders as the project moves from permitting into the next phase of development and pre-construction planning.

ORES staff published draft permit conditions on March 10, 2026, and a public comment hearing took place on May 12, 2026. In July 2026, ORES issued the final siting permit for the Chateaugay Wind Repowering Project. This marks an important milestone for the project and allows AES to continue advancing the next phase of development, including compliance filings, engineering design activities, environmental study updates, landowner coordination, and construction planning. AES is also preparing a decommissioning communications plan, which will be shared with the Town Board in the upcoming months. AES will continue to keep the Town informed as these activities progress and as the project team works toward future implementation steps.

This update may be shared with the Town Board and posted to the project webpage. If anyone has questions, comments, or feedback about Chateaugay Wind, the project team can be reached by email, phone, or through the project webpage.
